

# Resolving Conflicts While Merging (Lab)

---

 [coursera.org/learn/git-distributed-development/supplement/KP3am/resolving-conflicts-while-merging-lab](https://coursera.org/learn/git-distributed-development/supplement/KP3am/resolving-conflicts-while-merging-lab)

---

## Exercise

---

- Either begin with the **master** and **devel** repositories from the previous session on branches, or recreate them.
- Make modifications in the **master** branch that conflict with those in the **devel** branch. Commit them, and then use **git merge** to merge the **devel** branch into the **master** branch.
- Resolve the conflicts, either by doing a **git reset** and modifying either of the branches, or by modifying the conflicted files and then committing once again.

## Solution

---
